Canvas P20 — Widgets Everywhere: Drop-into-Slots, 28 Builders, Hardened Preview

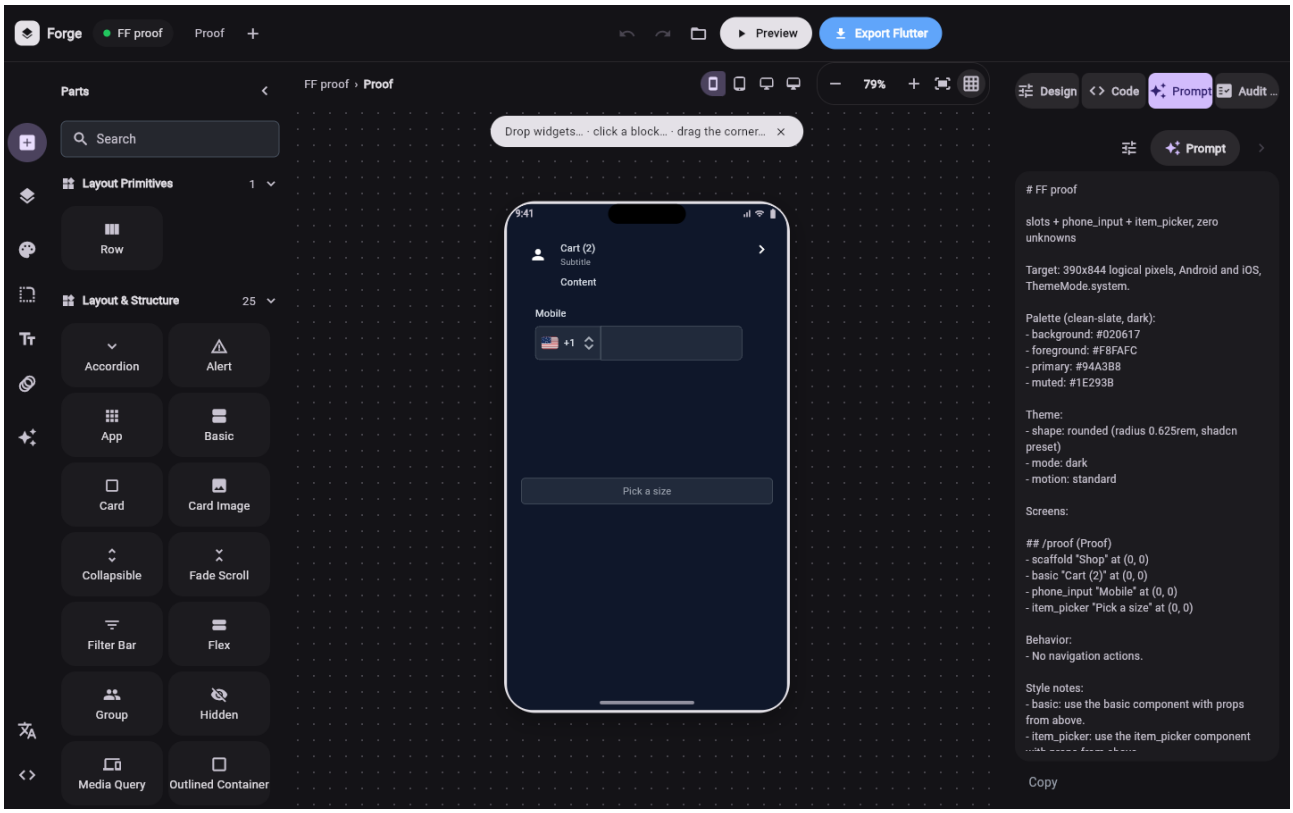

Branch feat/canvas-p3 · Flutter 3.47.2 · Release bundle, 1440×900 · Proof doc: scaffold(appBar+body slots) + phone_input + item_picker, ZERO unknown boxes · Zero page errors

Track	What landed	Tests
FF1 — drops	Drops onto slotted hosts assign the slot (scaffold→body, content-hosts→content, first-empty else); ghost renders in-s	+17
FF2 — builders	28 real builders incl. phone_input (the reported X-box); 18 documented refusals; Filter Bar 1138 SearchWidth + chip-ma	focus 326 / app 1138
FF3 — preview	Per-node error cards (debug seam), EmptyStates incl. tier-filtered, per-screen device default (manual sticks), chrome	+12
FF4 — codegen	29 emitters + multi-slot hosts (scaffold/basic/card_image replace-shadow); slot 326	goldens byte-identical
Follow-ups	Generator bridges 68→96 + all pins (97/108); markdown timer settles; stray animated	analyzer-to-doc droppings removed (backed u

Repo health: analyze clean both packages; app 1138 pass, core 326 pass. Palette now: 96 bridges + 10 bare + row + frozen nav = 108 canvas-ready of 134; 18 refused kinds documented with kit evidence (overlay infra, typed models, no widget). Dropzone action-prop name collision reported (not fixed — needs model rename).

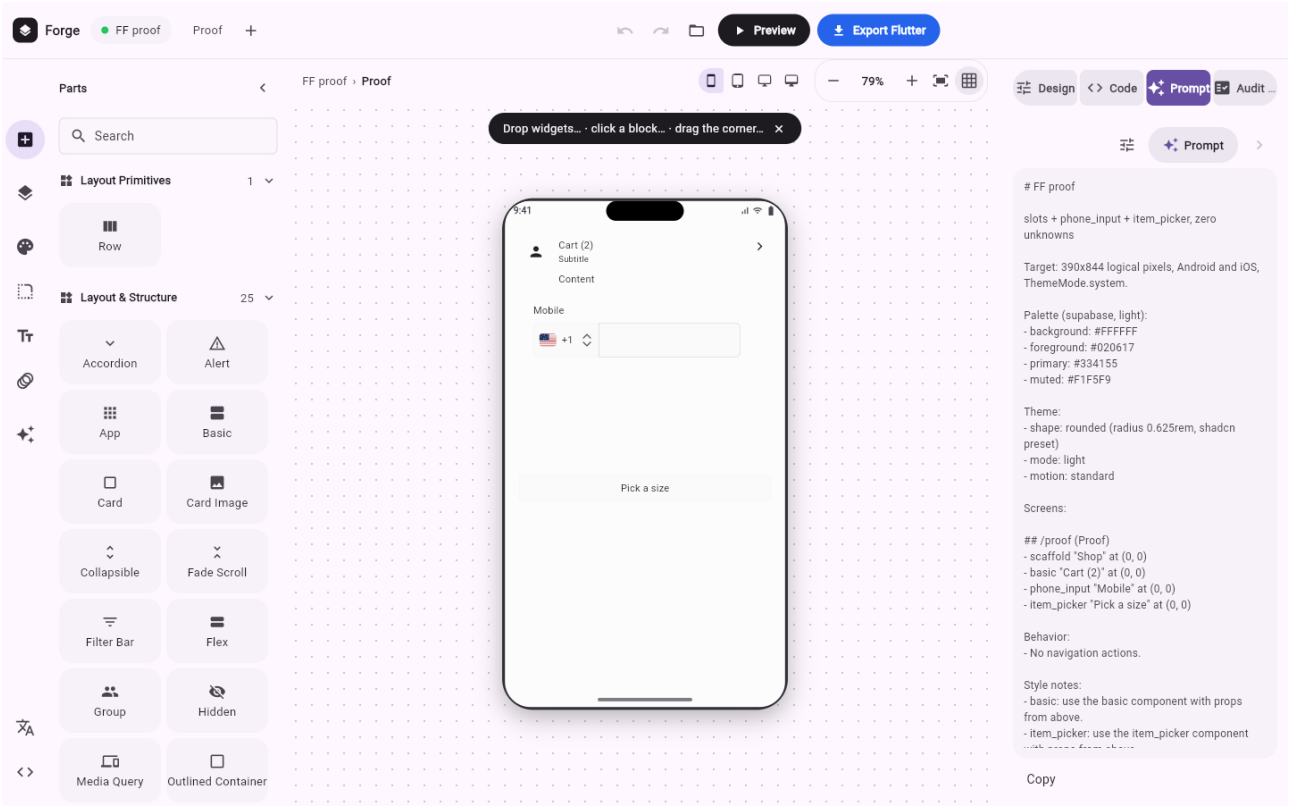

1 · Dark — your screenshot, fixed: phone_input renders, slots assigned

The exact unknown: phone_input box now renders a country-code phone field; slotted appBar/body show once (no flow duplicates); item_picker renders its trigger.

2 · Light — same proof, Forge light chrome

Slotted scaffold, phone field, picker — all on-token under supabase; no stray colors, no page errors.

How to drive it + what remains

Drag any part onto a scaffold/card/dialog: empty slots fill first (ghost shows where), occupied hosts parent as children; inspector Slots section assigns/clears per slot; locked nodes skip everything. Preview: per-screen devices by default, error cards isolate crashes, empty screens explain themselves. Remaining: 18 refused kinds (by design), dropzone prop collision, radius/padding/surface props, animations engine, publish pipeline. Test build: restart the :8900 server from build/web + hard-refresh (Cmd+Shift+R).
