Canvas P8 — Wave 3 (P/Q/R): Hardest Builders, Query Reconcile, Showcase Seed

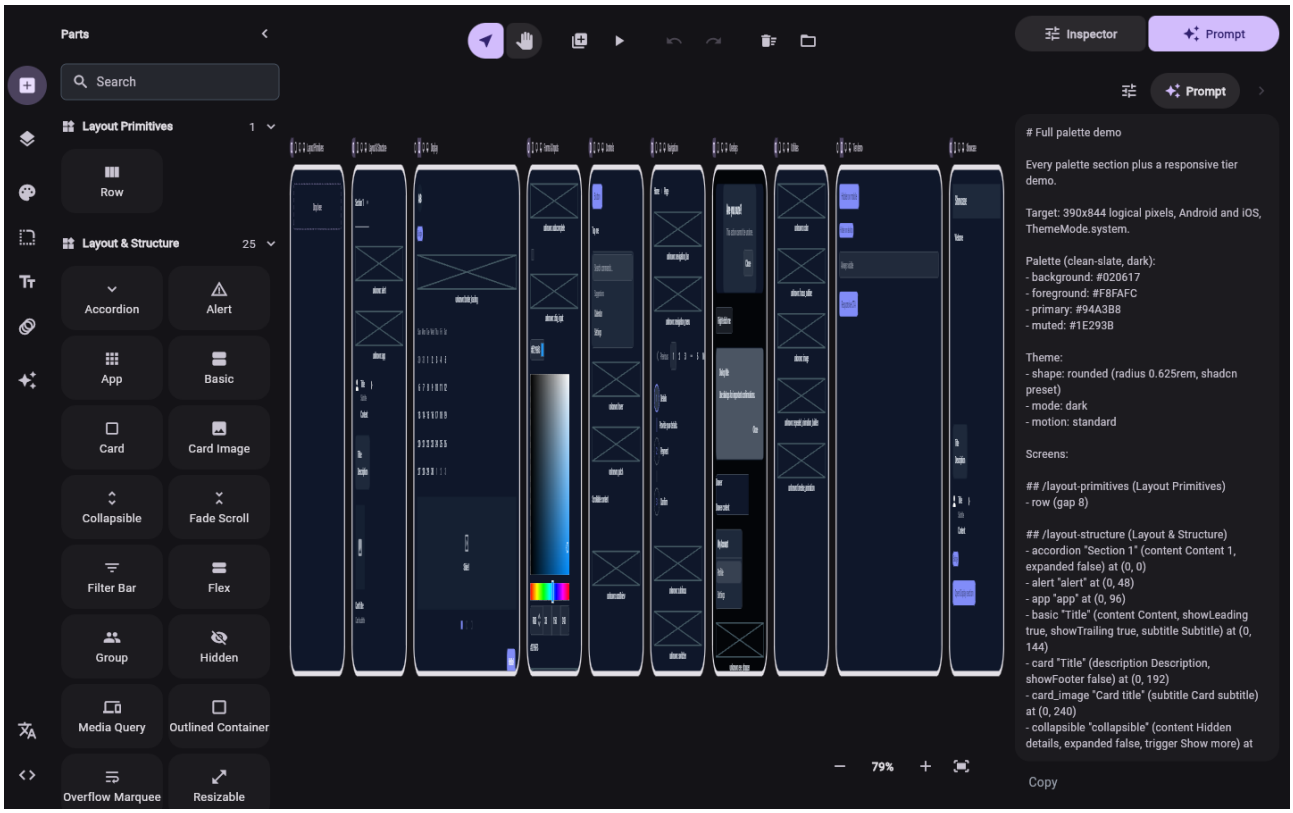

Branch feat/canvas-p3 · Flutter 3.47.2 · Release bundle, 1440×900 · Showcase seed: 10 screens, 137 nodes, 4 tap actions (Showcase■Display■Controls chain + tablet Tier demo)

Track	What landed	Tests
P — builders 3	17 builders: otp/calendar/date/time/carousel/tree/table/form×4/color×5/feature_carousel. Zero deferrals.	+65
Q — query	Kind-only match semantics pinned (chip/card examples); generator template reconciled read-only.	+9
R — seed	Showcase screen (scaffold+card+basic+badge+button), tap chain, tablet Tier demo, self-validating illegal-id validation.	+5
Follow-up	68 bridges + pins (68+10+row=79) + inspector_row 68-set (coordinator).	—

flutter analyze: clean both packages. Suite: app 481 pass, core 68 pass, 0 fail. Zero console errors with 137 nodes. 68/134 section kinds now have real builders (51 bridges + 10 bare + row + Showcase-driven coverage).

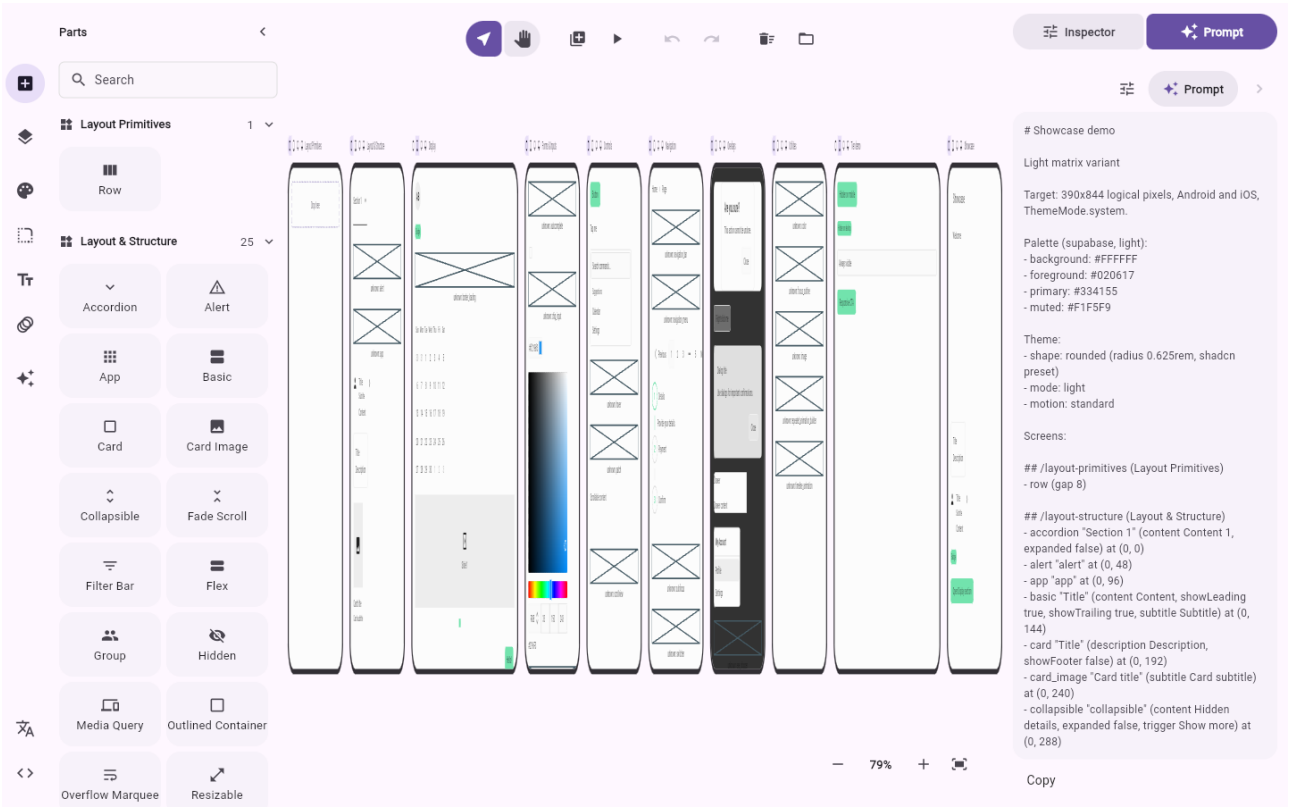

1 · Dark / clean-slate — OTP, color, HSL, calendar live

New this wave: OTP digit boxes, color-picker gradient + hue slider + swatches, HSL sliders, calendar grids, carousel dots, tree nodes, table headers, form shell, validated error state, feature cards. All render without exceptions in dark.

2 · Light / supabase — same seed, consistent

Prompt reports (supabase, light); new builders consistent in light; no stray colors; tier demo + tablet device screens present.

Backlog for the next loop

D1 — Remaining unknowns: only non-section kinds now (hidden utilities, WIP leftovers) — the palette is fully built.
D2 — Builder depth: multi-item/row integration for P-batch builders; command-shell narrow-width behavior (known intrinsic-width note).
D3 — Interaction depth: preview tap-chain end-to-end screenshot (needs scriptable input — currently widget-test covered); per-screen device widths in editor screenshots.
D4 — Regen: run the generator in write mode on a quiet tree to prove byte-stability, then diff.
Loop rule stands: find → fix → analyze+test → re-seed + matrix → next.
