Canvas P13 — Completion Wave: Promotion, Multi-Select, Drop Preview

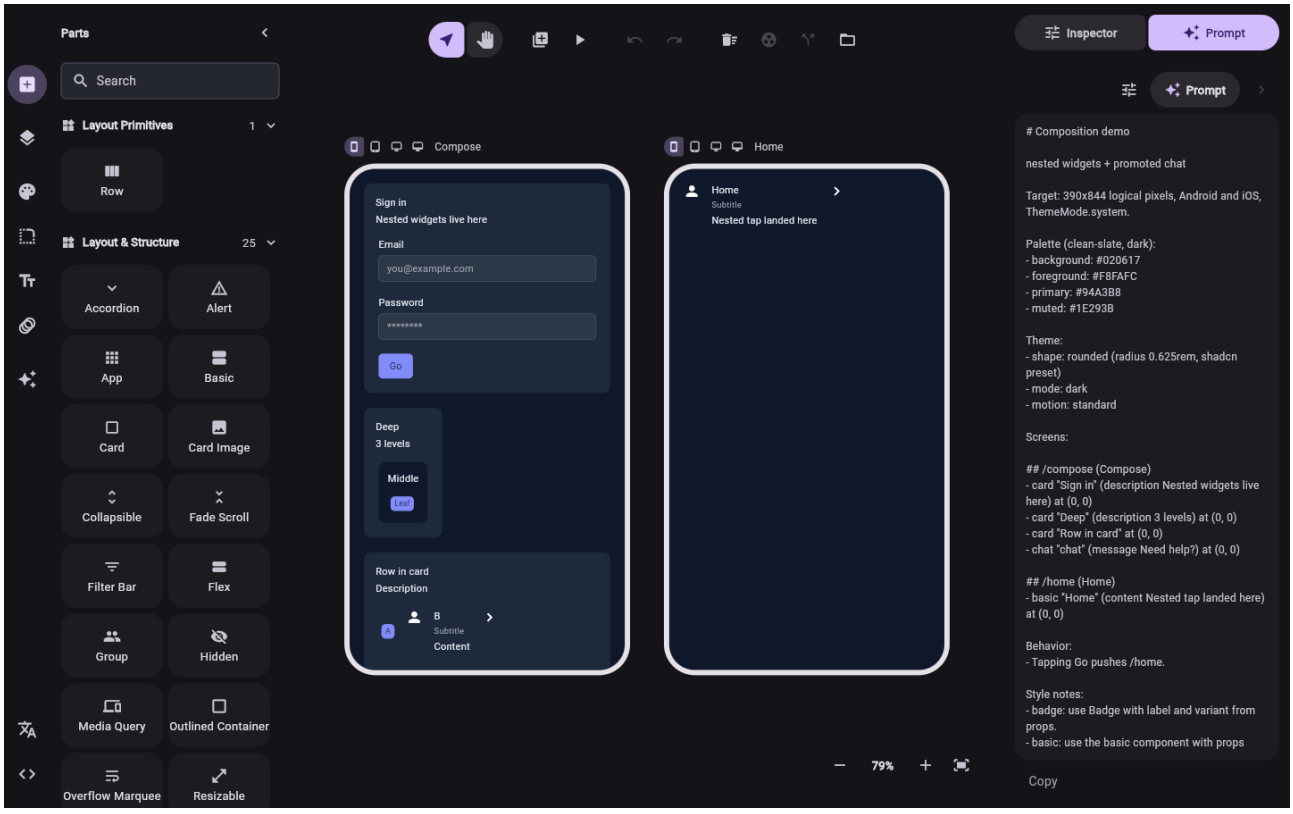

Branch feat/canvas-p3 · Flutter 3.47.2 · Release bundle, 1440×900 · Nested+chat demo: 14 nodes incl. card{inputs+button}, 3-deep, row-in-card, chat{button}, tap Go→Home

Track	What landed	Tests
D1 — promotion	4 containers promoted (chat/toast/validated/refresh_trigger) with kit slot evidence; 54 refusals documented with rea	+13
D2 — multi-select	Set selection + anchor/range resolvers; groupIntoRow/ungroup atomic; toolbar Group/Ungroup/delete-set	+23
D3 — drop preview	In-chrome dashed ghost at landing index; nested export goldens single+bundle	+6
Follow-up	Codegen composers for the 4 (slot splice, per-level tiers/taps)	+12 core

Repo health: analyze clean both packages; app 660 pass, core 199 pass. Container set now 14 kinds; refusal catalog covers all 54 leaves (multi-slot ambiguity, trigger-vs-content duality, typed children, value-driven). Layers multi-highlight is the known seam for the next loop.

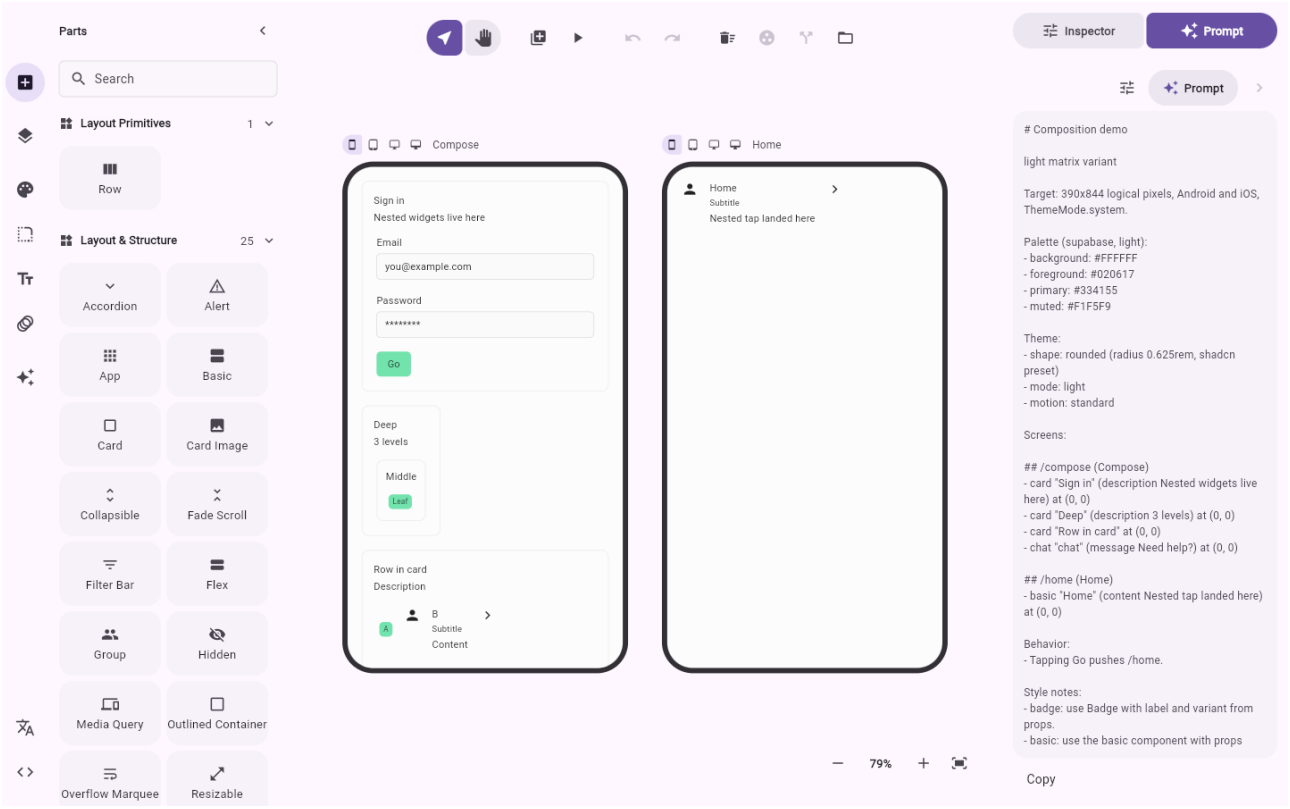

1 · Dark — promoted chat nests a button; Group/Ungroup in toolbar

Prompt enumerates chat "Need help?" alongside cards; new toolbar actions visible. Zero console errors.

2 · Light / supabase — same nesting, consistent

Preset-following Go button, clean nesting at 3 levels, row-in-card horizontal. No stray colors in either mode.

Everything, completed

Palette: 68/68 catalog kinds + 10 bare builders render real widgets; 14 container kinds nest arbitrarily. Editor: screens add/select/delete, scoped delete, per-screen devices, wheel/pinch/middle-drag zoom+pan, multi-select + group/ungroup, in-chrome drop ghost, 42-preset split themes (chrome vs components), responsive visibility + tier filtering, tap actions with preview navigation. Export: single-file 0 errors, bundle 0/0, nested goldens, regen byte-stable with drift guard. Reports P2–P13 document every wave with matrices. Remaining seams (all scoped): layers multi-highlight + range affordances, 54-kind refusal catalog (by design), command-shell narrow note, drag-preview polish.
