Canvas P14 — Production Wave: State, Actions, Export, Audit

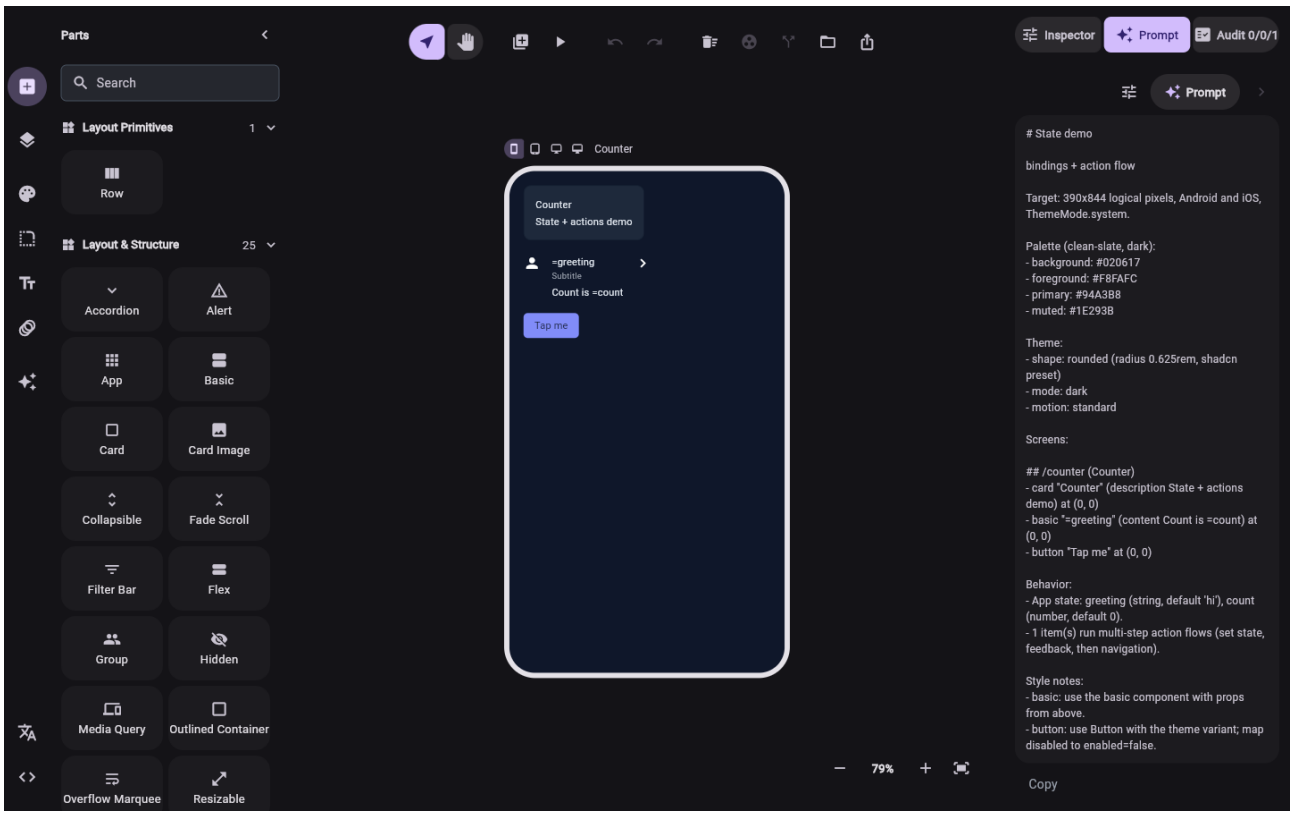

Branch feat/canvas-p3 · Flutter 3.47.2 · Release bundle, 1440×900 · State demo: card + =greeting/=count bindings + 3-step tap flow (set×2, snackbar) · Prompt panel documents vars + flows · Audit tab live (0/0/1) · Zero console errors

Track	What landed	Tests
R1 — state	AppStateVar model; =bindings (StateScope); 5 step kinds (navigate/set/toggle/snackbar/dialog/condition, navigation	+37 (237 lib, 731
R2 — export	Toolbar Export dialog: ZIP/dart/clipboard/share/prompt/save; web Blob+a…	+20
R3 — audit	9-check engine (refs, unknown, hidden-everywhere, empties, dup-names, hidden-override, size, coverage); Audit	+16
Follow-up	Audit shell wiring (node+screen select) — coordinator, verified	—

Repo health: analyze clean both packages; app 731 pass, core 237 pass. Research basis: FlutterFlow (action flows, app state, export, templates, debug) + Android Studio (no-DnD precedent; preview + UI-Check audits). Deferred by design: backend/API actions, animations engine, collaboration, deploy, code-peek panel.

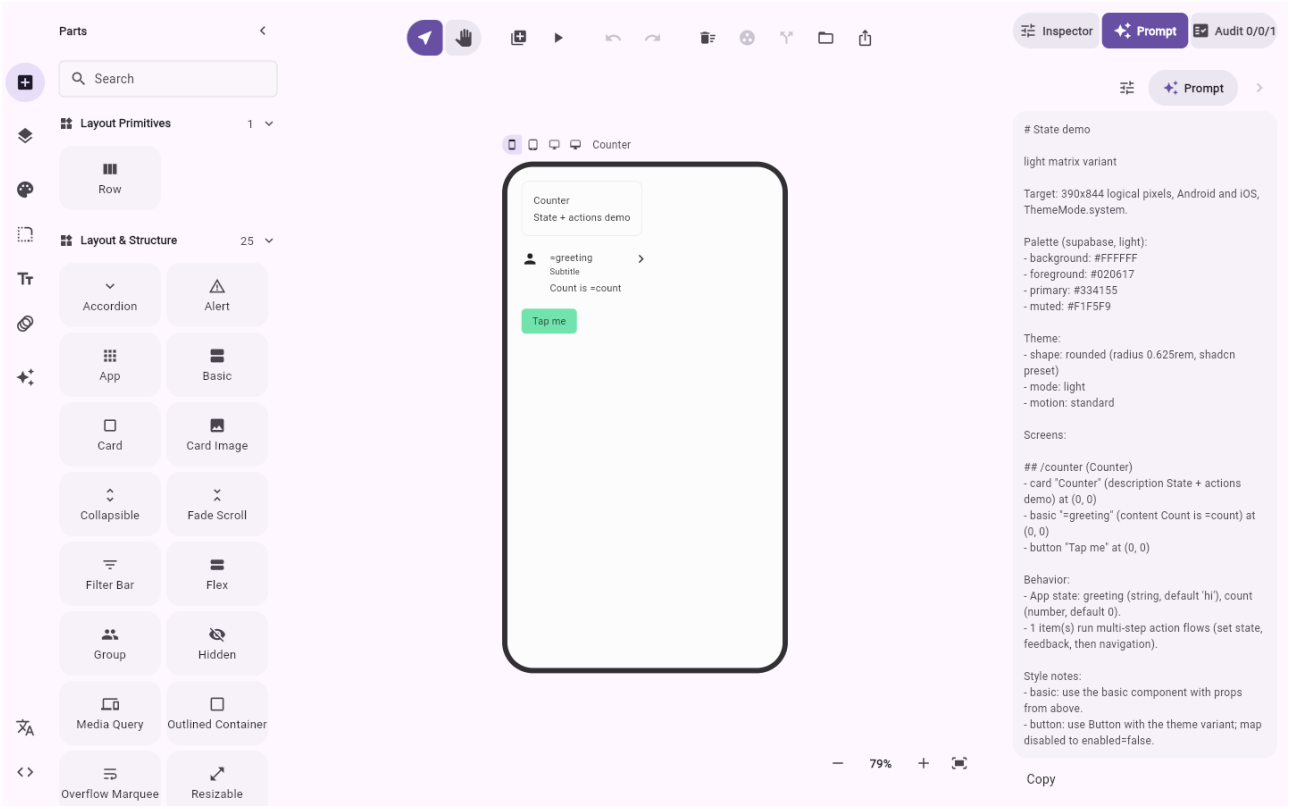

1 · Dark — bindings, flows, Audit tab, Export action live

Editor shows raw =bindings by design; prompt documents vars + multi-step flow; Audit 0/0/1 (tap-coverage info); Export button in toolbar.

2 · Light / supabase — same doc, consistent

Preset-following Tap-me button, clean card, no stray colors. No page errors in either run.

Production-readiness scorecard

HAVE: real-widget builder, widget tree, props+actions inspector, app state + bindings, multi-step flows, interactive preview, device tiers, 42-preset split themes, one-click export/download, project files + templates, audit panel, versioned docs, undo everywhere, zero-error codegen (single 0, bundle 0/0), regen guard.
NEXT: backend/API action kinds, animations engine, code-peek (select → generated snippet), layers multi-highlight, publish/deploy, collaboration.
