Canvas P17 — Forge Redesign: Editor Chrome Rebuilt

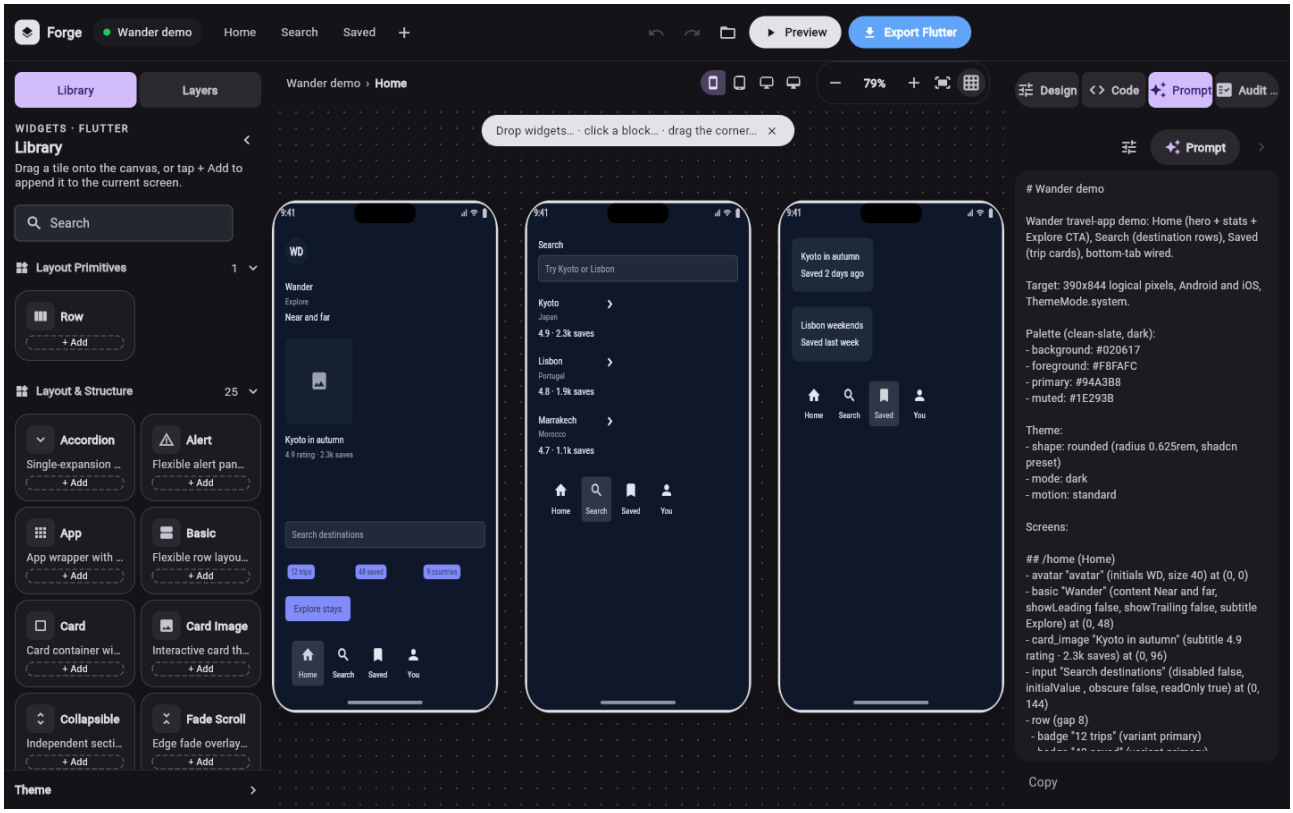

Branch feat/canvas-p3 · Flutter 3.47.2 · Release bundle, 1440×900 · Wander demo (3 screens, 18 nodes, 4-action nav cycle) · Zero page errors

Wave	What landed	Tests
Y0 spec	FORGE.md: element map, theme strategy (extend EditorColors), layout numbers, 4 feature deltas, Y1-Y6 plan with d	doc
Y1 demo	Real navigation_bar builder + seed_wander (Home/Search/Saved, 4-action cycle, BFS-connected)	859 / 290
Y2 topbar	Forge tokens (accent/onAccent/danger) + topbar: logo, project pill, screen tabs +/rename/delete, undo/redo, Preview,	+12
Y3 library	Library tiles with +Add (same DnD path), search, collapse; Layers/Theme mounts deferred to Y6	+6
Y4 canvas	Breadcrumb header + zoom/device strip, hint pill, dotted canvas, black selection toolbar, island overlay	+17
Y5 inspector	4 pills (Design/Code/Prompt/Audit), SELECTED card, read-only code-peek, Duplicate/Delete	+11
Y6 cutover	Shell mounts, icon rail deleted, Library|Layers pills, Theme disclosure; light forced, dark kept	914 / 290

Repo health: analyze clean both packages; app 914 pass, core 290 pass. Zero references to icon_rail in code. All shadcn components render from the shared kit; chrome uses kit widgets + EditorTheme tokens only.

Forge shell with Wander demo (dark chrome)

Topbar with screen tabs + Preview + Export Flutter; Library|Layers pills with +Add tiles; breadcrumb Wander demo › Home; dotted canvas; Dynamic Island phones; Design/Code/Prompt/Audit pills; Theme disclosure at panel bottom. All three Wander screens render with bottom-tab navigation wired.

What changed vs the old chrome + next

Removed: 52px icon rail, floating top toolbar, bottom-right zoom pill, ScreenLabel rows. Added: topbar tabs (add/rename/delete with dangling guard), breadcrumb trail, in-header zoom + device strip, hint pill, dots, selection toolbar (up/down/duplicate), island, 4-pill aside with code-peek, inspector Duplicate/Delete, theme disclosure. Light mode works via the doc theme (seed ships dark default today — flip any doc to light in the Theme disclosure). Next: radius/padding/surface prop follow-up (spec’d in FORGE.md §4.4), selection-anchored toolbar, per-selection code scope.
