Canvas P7 — Wave 2 (M/N/O): Builders, Dogfood, Regen Guard

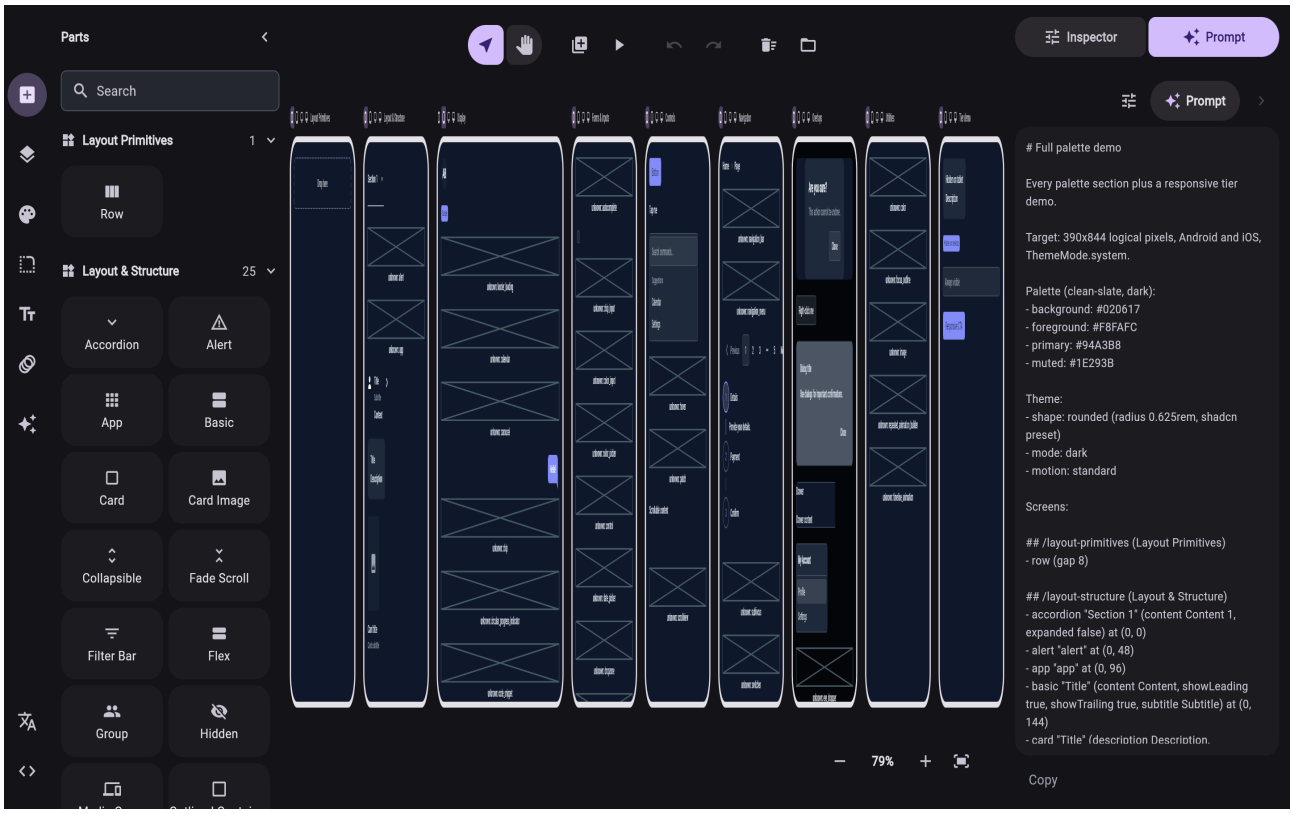

Branch feat/canvas-p3 · Flutter 3.47.2 · Release bundle, 1440×900 · Same full-palette seed (9 screens, 131 nodes, 2 actions)

Track	What landed	Tests
M — builders 2	15 builders: menu/popover/popup/menubar/dropdown/context/hover/command/swiper/refresh + tab×3/stepper/slid	+83
N — dogfood	Kit Tooltip/TextField/Dialog/buttons across 8 chrome files; behavior preserved (tooltips, dialogs, enable-states, me	+8
O — regen guard	_bridgeKinds covers all 51 bridges; drift guard test (import-based, exact-set + pins 51+10+row=62).	+4
Follow-up	Added M's 15 to _bridgeKinds + pin updates (done by coordinator).	—

flutter analyze: clean both packages. Suite: app 416 pass, core 68 pass, 0 fail. Zero console errors with 131 nodes.

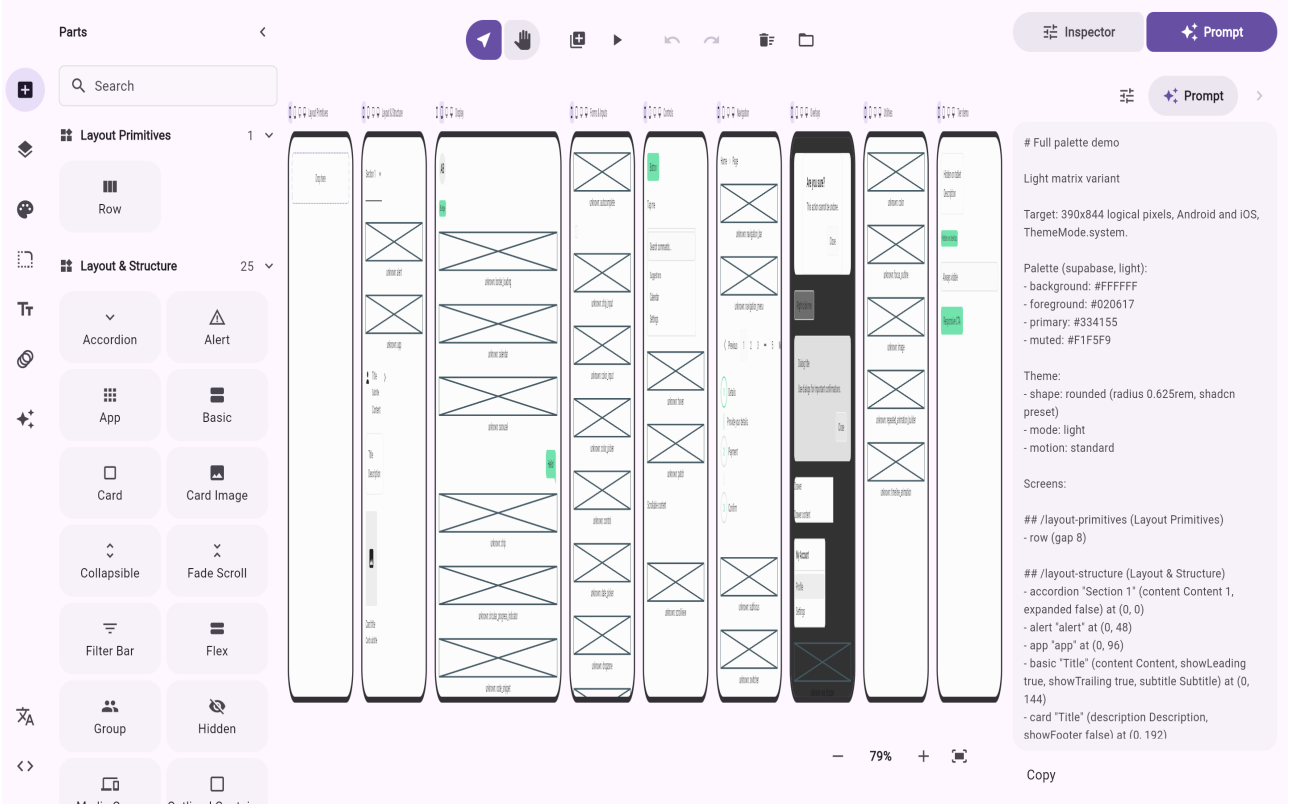

1 · Dark / clean-slate — overlay builders live

New this wave: alert dialog ("Are you sure?"), dialog card, My Account/Profile/Settings menu, command palette ("Search commands..."), stepper (Details/Payment/Confirm), pagination, drawer. Remaining X-box unknowns are the scoped backlog (calendar, table, carousel, tree, form/*, color/*, input_otp, feature_carousel).

2 · Light / supabase — same seed, consistent

Prompt reports (supabase, light); chrome + components consistent; no stray colors. Tier demo filters live at phone width.

Backlog for the next loop

C1 — Remaining builders: calendar, date_picker, time_picker, carousel, table, tree, form/form_field/formatted_input/validated, color_picker/color_input/hsl/hsv/history, input_otp, feature_carousel.
C2 — Builder polish: multi-item/row integration for new builders; command shell scroll behavior at narrow widths (intrinsic-width note from Track M).
C3 — Dogfood leftovers: none in scope — all swapped; Scaffold/AppBar/NavigationBar/drag-Material stay by documented exception.
C4 — registryMatchesQuery: hand-edited kind-only matching vs generator kind+label words — reconcile or the next regen reverts that hunk.
Loop rule stands: find → fix → analyze+test → re-seed + matrix → next.
