Canvas P16 — Sizing Wave: Render Unification, Resize Handles, Row Flex

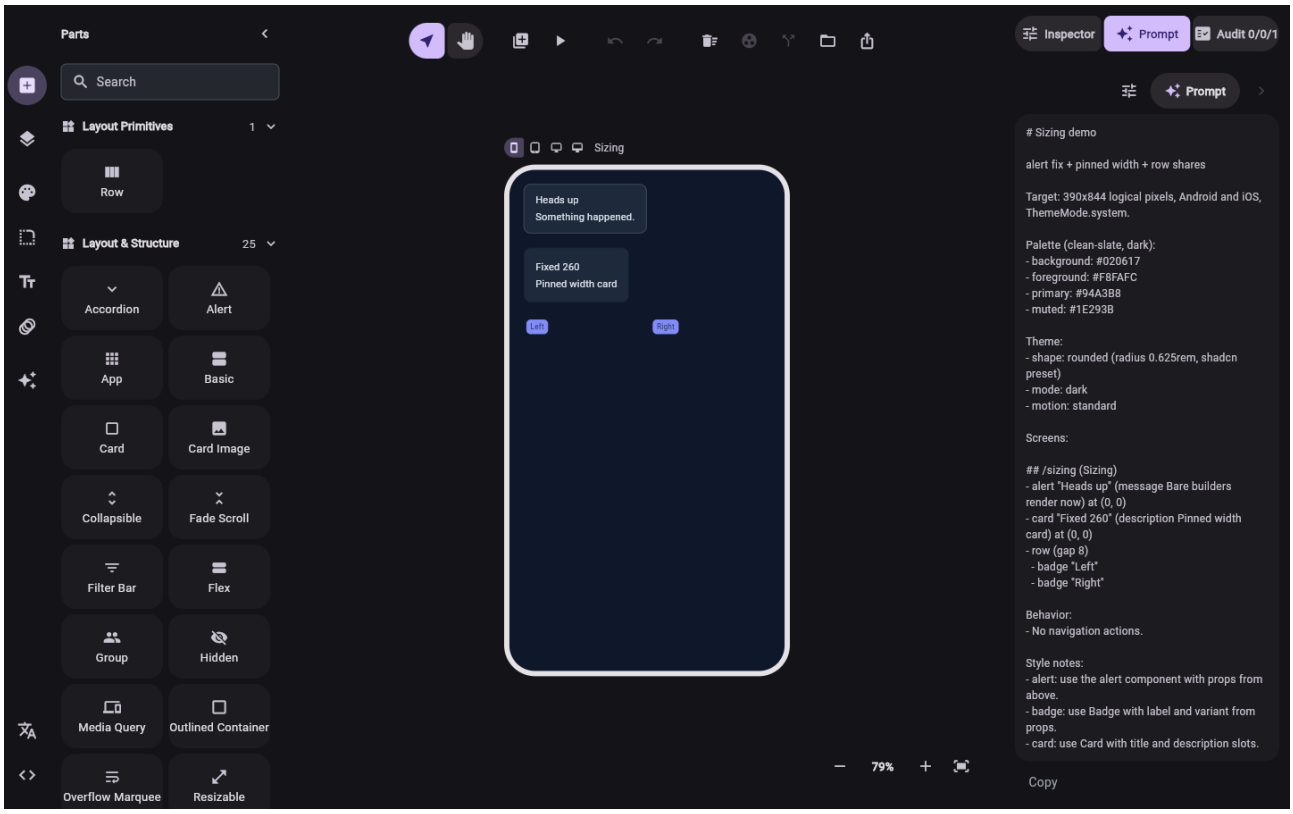

Branch feat/canvas-p3 · Flutter 3.47.2 · Release bundle, 1440×900 · Sizing demo: alert + pinned-260 card + equal-share row · Zero console errors

Track	What landed	Tests
U1 — render path	Catalog miss falls back to registry bare builders: all 10 EASY kinds render (unknown:alert fixed); row renders struc	+27
U2 — sizing	Node w/h model (auto default, JSON-sparse); setNodeSize validated+undoable; right/bottom/corner handles (zoom	+67
Follow-ups	Ungroup preserves w/h; DesignCanvas→Surface resize wiring; preview coordinator w/h (pinned)	+6

Repo health: analyze clean both packages; app 839 pass, core 282 pass. Sizing semantics: auto=null (today's behavior); fixed px via handles/inspector (48–stage clamp at gesture layer, store permissive); rows share null-width children equally, fixed-width take pixels; overflow visible as authoring signal. Responsive: v1 fixed + hiddenOn; per-tier sizes deferred (breakpointValues merges into item props — reserved keys would leak).

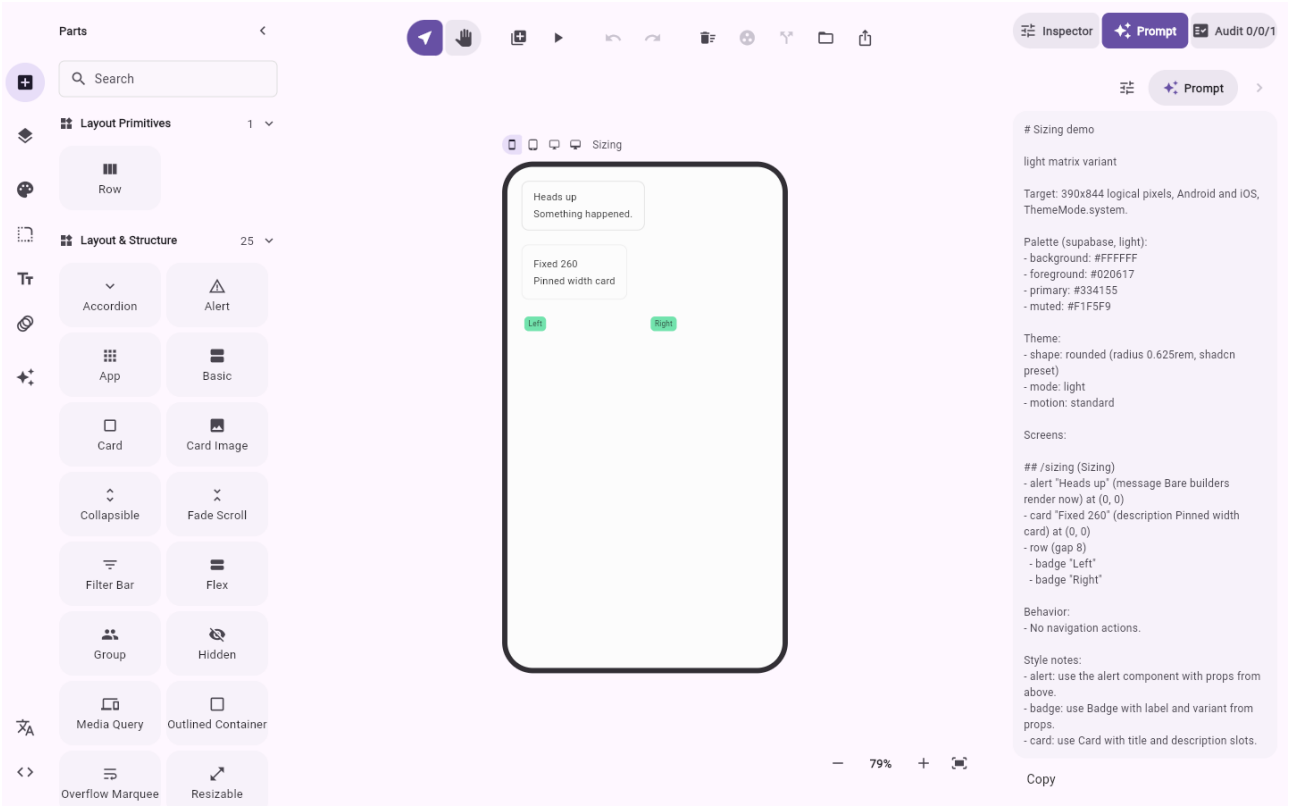

1 · Dark — alert renders, 260px card pinned, row shares equally

No unknown boxes, no X placeholders. The Fixed-260 card is visibly narrower than the full-width alert; Left/Right badges split the row instead of collapsing to min-intrinsic (the reported 45px squeeze: loose-Flex default → tight flex).

2 · Light / supabase — same sizing, consistent

Pinned card, equal shares, real alert — all on-token in light. No page errors in either run.

For your testing (local run on :8900)

Select any node → drag the right/bottom/corner handles (zoom-aware) or type W/H in the inspector Layout group (Auto resets). Rows: leave widths auto to share equally, or pin pixels per child. Handles commit once per gesture (single undo). If anything looks stale after updating, hard-refresh (Cmd+Shift+R) — the Flutter service worker caches aggressively.
